Vacuum Connecting Tubes Hypodermic Syringes

ULTIMATE QUALITY WEGO INTELLIGENT MANUFACTURING

REDUCE THE RISK OF CROSS CONTAMINATION, OFFER MORE SPECIFICATIONS TO CHOOSE FROM

Vacuum connecting tubes

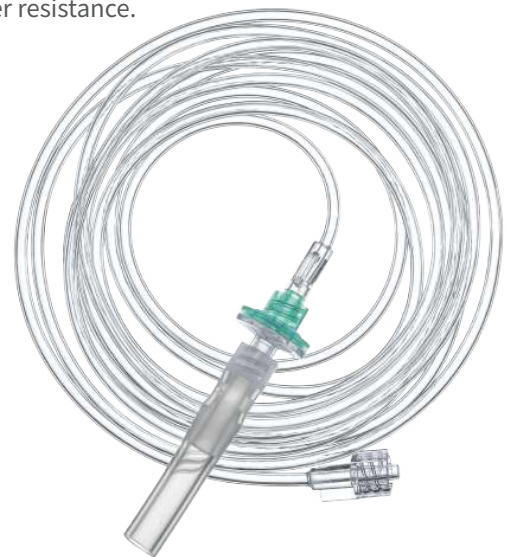

The vacuum connecting pipe consists of a long pipe, a short pipe, a Ruhr joint, and a hydrophobic filter:

1. Selected high-quality pipes, safe and soft, conducive to clinical operation.
2. The pipeline and joints have good airtightness, good ventilation and water resistance.
3. The interface is suitable for various negative pressure suction devices.

Connecting pipe length

50cm
100cm
200cm
250cm

Products can be customized for production
Meet various length requirements

ACCURATE POSITIONING, STABLE TRANSPLANTATION

Hypodermic Syringes

Usage:

Suitable for pushing embryos into the uterine cavity during embryo transfer process

Characteristic:

The injection feels comfortable and has good airtightness, improving the stability of the embryo in the transfer tube and making the transfer process more controllable
